DETAILED ACTION

Remarks

1. In response to the Appeal Brief filed on 09-August-2005, claims 1-22 are pending in the application, of which, claims 1, 9 and 17 are presented in independent form.

Allowance

2. Claims 1-22 are allowed over the prior art made of record.
3. The following is an examiner's statement of reasons for allowance:

The appellants' arguments presented in the Appeal Brief, filed on 09-August-2005 have been fully considered and are deemed persuasive, in view of the descriptions provided by the specification:

Independent claim 1 recites, among other limitations, "grouping at least some values into potential sets"; "selecting candidate sets from at least some potential sets"; "grouping at least some candidate sets into covers"; and "using at least one cover, generating at least one query representing a source schema-to-target schema mapping". In view the specification's description of "cover", where, subsets are grouped into "covers" such that every value correspondence appears at least once in each cover, and that "covers" are presented in ranked order on, e.g., the output device,

such that the user can then establish a selected cover by appropriately manipulating the input device, the above referenced limitations of claim 1 are not anticipated or suggested by the prior art made of record.

The prior art made of record does not teach or suggest the limitations of, “allowing a user, in a user interaction, to incrementally add or delete a value correspondence from the subset”; “based on the user interaction, generating a new mapping”; and “permitting the user to add or delete a value correspondence embodied in the new mapping to generate another mapping”, as recited in independent claim 9.

The prior art made of record does not teach or suggest the limitations of, “computer readable code means for generating subsets of value correspondences such that (1) each subset has at most one value correspondence per target attribute, (2) for each subset requiring more than one source relation to undertake a mapping, a join path can be found between the relations, and (3) each subset includes at least every value correspondence”, as recited in independent claim 17.

Claims 2-8 are allowed as dependents of allowed independent claim 1.

Claims 10-16 are allowed as dependents of allowed independent claim 9.

Claims 18-22 are allowed as dependents of allowed independent claim 17.
